

1. Record Nr.	UNINA9910743685803321
Autore	Ullberg Eskil
Titolo	Intellectual Property Statistics : Measuring Framework for Standards and Trade in Ideas // by Eskil Ullberg
Pubbl/distr/stampa	Cham : , : Springer International Publishing : , : Imprint : Springer, , 2023
ISBN	3-031-36386-8
Edizione	[1st ed. 2023.]
Descrizione fisica	1 online resource (194 pages)
Collana	Contributions to Economics, , 2197-7178
Altri autori (Persone)	KoopmanRobert
Disciplina	346.048
Soggetti	International trade Statistics Technological innovations Sampling (Statistics) International Trade Applied Statistics Economics of Innovation Methodology of Data Collection and Processing
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	1. Introduction -- 2. Theory of Value -- 3. Today's Balance of Payment Statistics and Data Gap -- 4. Today's Financial Accounting Standards and Data Gap -- 5. Overview of the Framework -- 6. Description of the Collection and Compilation of Data for each Element -- 7. A Proof-of-Concept Study in Perú -- 8. Can Data be Collected in a Developing Nation?- 9. Future Steps Towards New Standards and Statistics.
Sommario/riassunto	Patents and other intellectual property (IP) rights are increasingly part of cross-border trade in their own rights. Patent transfers and patent licensing between inventors, investors and innovators create new business strategies of cooperation in the creation of new technology – increasing the productivity in the stock of technology assets – and efficient “distribution” of these rights. The rights bundles are then used – also increasingly – in products and services being traded cross-border, furthering economic efficiency created by this cooperative strategy. Today's international trade statistics, however, lack statistics

explicitly on trade flows from ideas, based on IP rights. This book offers an idea based statistical framework to measure IP, (i.e., increasingly depends on trade in ideas) and explores ways to introduce the framework into international standards. Specifically, it offers a theory of value to measure the flows from IP and an asset view of IP to deal with allocation of resources and who owns these rights. This is then contrasted with the current way IP is treated and a “gap analysis” is used to identify what needs to change in the standards. This new framework can help develop theories, policies, practices and inform the decisions needed to better leverage the human capital formation of inventors everywhere. Praise for Intellectual Property Statistics... “In this book, Prof. Ullberg has undertaken a Herculean task – to lay out a paradigm for the collection of IP Statistics to ensure that the ... market of trade in ideas has the information and data necessary to function well. [the] volume should be viewed as a starting point, a work in progress, but an important one that could very well influence the development of this important set of data on trade in ideas. At a time when global issues ... require both new ideas and the spread of those ideas widely to help ensure both economic growth and continued global economic convergence data that helps us monitor and evaluate what is happening in trade in ideas will be extremely valuable.” – Robert Koopman, American University, Washington, DC, USA and Former Chief Economist, World Trade Organization, Geneva, Switzerland.
