#### Sommario/riassunto

This book explores the complex and various forms that privatization of education takes on a global scale at different ages of schooling. Through the spread of neoliberal policies in education both in the global North and the global South, the book suggests that this process is leading to new forms of schooling and socio-spatial dynamics linked to the creation of increasingly competitive school markets. The book highlights some of the main issues that such competition generates by focusing on the acceleration of the segregative processes on one hand but also on the alternatives that are emerging regarding this global context on the other hand. It considers processes of domination, hegemony, but also exclusion and segregation, eventually exploring contradictions inherent to societies. It presents innovative empirical and conceptual research by international scholars from the fields of social geography, sociology, history and demography in the United States, Lebanon, France, Afghanistan and Chile, thereby transcending disciplinary boundaries. Developed in under or unexplored contexts, the book broadens the reflection to social representations, individual and collective strategies, adaptation, innovation and also resistances.
