Sommario/riassunto

This is the latest report in a process towards International Cataloguing Principles that began in 2003 and will continue through 2007. Through the series of meetings represented by each volume the reader will be able to track the development and consultation taking place throughout the different parts of the world that will culminate with the creation of a truly international set of principles to guide the development of cataloguing codes worldwide.

#### Sommario/riassunto

The LNCS journal *Transactions on Large-scale Data and Knowledge-centered Systems* focuses on data management, knowledge discovery, and knowledge processing, which are core and hot topics in computer science. Since the 1990s, the Internet has become the main driving force behind application development in all domains. An increase in the demand for resource sharing across different sites connected through networks has led to an evolution of data- and knowledge-management systems from centralized systems to decentralized systems enabling large-scale distributed applications providing high scalability. This, the 55th issue of *Transactions on Large-Scale Data and Knowledge-Centered Systems*, contains five fully revised regular papers covering a wide range of very hot topics in the fields of data driven science life science, workflows, weak signals, online social networks, root cause analysis, detected anomalies, analysis of interplanetary file systems, concept weighting in knowledge graphs, and neural networks.
