at a global level -- 11. ESG targets for the financial sector and the choice of legal instruments -- 12. Environmental, Social & Governance criteria in the Netherlands: interaction between government and the courts -- 13. The language of the European Union about SRI: a diachronic linguistic analysis (2002-2022).

Sommario/riassunto

This book is an essential resource for anyone looking to gain greater insight into how the EU is approaching sustainable development and how the integration of ESG strategies is transforming this space. With an in-depth analysis of the ESG framework, SRI strategies, and their connection to sustainable development, this book is an indispensable resource for policy-makers, regulators, educators, and the corporate world. Highly recommended for all those interested in European development. —Scheherazade S. Rehman, PhD, GW Deans Professorial Fellow of International Finance, Professor of International Finance (GWSB) & Professor of International Affairs (ESIA), The George Washington University, USA This book analyses sustainable finance policies implemented by the European Commission since January 2020. Gathering contributors from a range of European and international universities, it explores how EU strategy on green finance encourages and stimulates socially responsible investments that provide solutions to the challenges of the energy transition. The book provides a comprehensive coverage of economic, financial and legal issues concerning sustainable finance and ESG factor integration in the EU. The first part discusses theoretical and empirical perspectives on socially responsible investments (SRIs) and ESG integration, while the second section focuses specifically on the role of corporate governance in both institutional and private investment spheres. Part III explores valuation and risk, including a discussion of current trends in SRI funding in the new European ESG Regulatory Framework and an exploration of blue finance and its incorporation into EU financial strategy. The final section discusses legal and regulatory issues, including a discussion on the current debate between soft and hard law concerning ESG regulation. This edited collection will be of interest to researchers and policymakers working in green finance, sustainability, energy economics and financial law. Luca Spataro is a Full Professor in Public Economics and the Head of the Department of Economics and Management, University of Pisa, Italy. Maria Cristina Quirici is an Associate Professor in Financial intermediaries in the Department of Economics and Management, University of Pisa, Italy. Gabriella Iermano is an Associate Professor in Commercial Law in the Department of Law, University of Pisa, Italy.
