Are Chinese Elders Happy -- Chapter 3. Chinese-style Couples -- Chapter 4. The Impact of Mobile Phone Use on

Sommario/riassunto

This book analyzes how Chinese people use their time, including how busy Chinese seek a healthy work-life balance, how some children win from the outset in terms of education, and how people pursue quality of life outside of or after work. General readers will get a vivid and detailed impression of the way Chinese people spend their time, while researchers will find a wealth of phenomena and data for analysis from both economic and social perspectives. The research presented here was conducted in the context of the Chinese Time Use Survey (CTUS), a nationwide initiative launched by Inner Mongolia University in 2017. The CTUS covers 29 Chinese provinces, and the database contains the time use information of 30,591 people aged 3 years and over from 12,471 households. The survey collects information at three main levels: personal, family and community.
