This book is devoted to a systemic study of socio-economic development risks arising in the Decade of Action, as well as the prospects for risk management in support of sustainable development. It aims to overcome fragmentary consideration of risks in the existing literature through their comprehensive coverage and the establishment of their interconnections from the perspective of sustainable development. The novelty of this book is that it provides a comprehensive accounting of socio-economic development risks in the Decade of Action, as well as a rethinking of these risks from a sustainable development perspective. The book also opens up the possibility of the most comprehensive and effective risk management in support of sustainable development. The practical relevance of the book stems from the fact that it describes and discusses practical experience in detail and accompanies the theoretical material with numerous case studies, including cases and frameworks with extensive coverage of international best practices. The book is intended for scholars, for whom the book forms a systemic scientific view of the risks of socio-economic development arising in the Decade of Action, as well as the prospects for risk management in support of sustainable development.
