Sommario/riassunto	When it comes to historical violence and contemporary inequality, none of us are completely innocent. We may not be direct agents of harm, but we may still contribute to, inhabit, or benefit from regimes of domination that we neither set up nor control. Arguing that the familiar categories of victim, perpetrator, and bystander do not adequately account for our connection to injustices past and present, Michael Rothberg offers a new theory of political responsibility through the figure of the implicated subject. The Implicated Subject builds on the comparative, transnational framework of Rothberg's influential work on memory to engage in reflection and analysis of cultural texts, archives, and activist movements from such contested zones as transitional South Africa, contemporary Israel/Palestine, post-Holocaust Europe,

and a transatlantic realm marked by the afterlives of slavery. As these diverse sites of inquiry indicate, the processes and histories illuminated by implicated subjectivity are legion in our interconnected world. An array of globally prominent artists, writers, and thinkers—from William Kentridge, Hito Steyerl, and Jamaica Kincaid, to Hannah Arendt, Primo Levi, Judith Butler, and the Combahee River Collective—speak to this interconnection and show how confronting our own implication in difficult histories can lead to new forms of internationalism and long-distance solidarity.

Sommario/riassunto	<p>This book is a practical guide for anyone who performs eyelid surgery, whatever their specialty, and is particularly relevant for ophthalmologists in training and non-oculoplastic surgeons who may venture into this field. The step-wise text is supported by numerous original illustrations. It emphasises a logical, minimalist approach to lid surgery and challenges some popular practices. The novel techniques unique to this volume may be of interest to experienced oculoplastic surgeons. They include emphasis on the superiority of Meibomian orifice line lid traction suture placement over using the grey line. This makes bolsterless suture tarsorrhaphy a viable and better alternative to temporary surgical tarsorrhaphy. Maximal use of direct closure and directed laissez-faire encourages tissue expansion in eyelid reconstruction, aided greatly by the placement of a magic suture. The</p>

seductively simple medial canthal thermoplasty corrects medial lid laxity without dissection. The control of active thyroid eye disease with orbital depot steroid injections, the importance of full orbital volume replacement after eye removal and the superiority of modified Bick lid margin resection over the lateral tarsal strip for lid tightening are further departures from traditional practice.
