Sommario/riassunto	As the dominant narrative forms in the age of media convergence, films and games call for a transmedial perspective in narratology. Games allow a participatory reception of the story, so that the ontological boundary transgression between the narrated world and the world of the recipient comes into focus. These diverse transgressions-medial and ontological-are the subject of this transdisciplinary compendium, which covers the subject in an interdisciplinary way from various

perspectives: game studies and media studies, but also sociology and psychology, to take into account the great influence of storytelling on social discourses and human behavior.
