

1. Record Nr.	UNINA9910760268203321
Titolo	Fluorescence-Guided Surgery : From Lab to Operation Room // edited by Takeaki Ishizawa
Pubbl/distr/stampa	Singapore : , : Springer Nature Singapore : , : Imprint : Springer, , 2023
ISBN	981-19-7372-5
Edizione	[1st ed. 2023.]
Descrizione fisica	1 online resource (0 pages)
Disciplina	616.9940754
Soggetti	Surgery Endoscopic surgery Cancer - Imaging Oncology Diseases Anatomy Minimally Invasive Surgery Cancer Imaging
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references.
Nota di contenuto	Part I Basics of intraoperative fluorescence imaging [Introduction] -- Chapter 1 Clinically available fluorescent reagents -- Chapter 2 ICG fluorescence imaging system for open surgery -- Chapter 3 ICG fluorescence imaging system for endoscopic surgery and robot-assisted surgery -- Chapter 4 5-ALA fluorescence imaging system -- Chapter 5 How to introduce fluorescence imaging to the operating room -- Chapter 6 Recording of intraoperative fluorescence imaging -- Part III Intraoperative Fluorescence Imaging [Practice] - Perfusion assessment -- Chapter 7 Introduction -- Chapter 8 Coronary angiography -- Chapter 9 Cerebral angiography (cerebral aneurysm) -- Chapter 10 Evaluation of blood perfusion in skin flaps -- Chapter 11 Evaluation of blood perfusion in the upper gastrointestinal tract -- Chapter 12 Evaluation of blood perfusion in colorectal surgery -- Chapter 13 Perfusion assessment in HBP surgery and liver transplantation -- Part III Intraoperative Fluorescence Imaging [Practice] - Imaging of cancer -- Chapter 14 Liver cancer (primary liver cancer,

metastatic liver cancer) -- Chapter 15 Lung cancer (marking the tumor site) -- Chapter 16 Gastric cancer (primary tumor, peritoneal dissemination) -- Chapter 17 Brain tumor -- Chapter 18 Bladder cancer -- Part IV Intraoperative Fluorescence Imaging [Practice] - Imaging of lymph nodes and lymph vessels -- Chapter 19 Introduction -- Chapter 20 Identification of sentinel lymph nodes in breast cancer surgery -- Chapter 21 Identification of sentinel lymph nodes in gastric cancer surgery -- Chapter 22 Identification of sentinel lymph nodes in colorectal cancer surgery -- Chapter 23 Identification of sentinel lymph nodes in gynecologic surgery -- Chapter 24 Lymphography and evaluation of lymphedema -- Part V Intraoperative Fluorescence Imaging [Practice] - Imaging of anatomical structures -- Chapter 25 Imaging of the bile ducts (fluorescence cholangiography) -- Chapter 26 Hepatic segmentation -- Chapter 27 Lung segmentation -- Chapter 28 Visualization of the ureter -- Chapter 29 Imaging of the parathyroid gland -- Part VI Intraoperative Fluorescence Imaging in Practice [Development] -- Chapter 30 Development of novel fluorescent probes - Rapid Intraoperative Visualization of Microcarcinoma by Local Application of Chemical Fluorescence Probes -- Chapter 31 Development of a new imaging system -- Chapter 32 Development of a new operating room that integrates imaging information -- Chapter 33 Therapeutic applications (1): Photodynamic therapy using porphyrin compounds -- Chapter 34 Application to therapy (2): Photoimmunotherapy using a near-infrared fluorescent probe.

---

#### Sommario/riassunto

This volume is a practical guide of theranostics using intraoperative fluorescence imaging technology, as an all-out effort by the Japanese Society for Fluorescence Guided Surgery. It describes the various approaches the technique is being used such as vascular imaging, identification of lymphatic vessels by intratissue injection, lymph node imaging, and imaging for identification of anatomical structures. The book is organized into three major parts and the first one delivers the basics, introducing the use of the technology in clinical settings and initial setups. Next comes the description of clinical applications where chapters illustrate perfusion assessment, cancer localization, anatomy visualization, and lymph nodes/ducts mapping. Each chapter is devoted to the specific surgical field and disease areas, presenting images and videos of case studies. The last part presents some upcoming techniques for treatments. The Editor and the authors wish the ideas presented here will be hints to bridge the knowledge between surgeons and basic researchers for further innovation and practicality. It is important to stay up-to-date since intraoperative fluorescence imaging has been applied to clinical settings in various surgical fields and at the same time, novel techniques improving the efficacy of the technology have also been developed actively. *Fluorescence-Guided Surgery – From Lab to Operation Room* is recommended for surgeons, operating nurses, medical experts, basic researchers and, industry engineers worldwide beyond boundaries of specialties. Edited and written by experts of The Japanese Society for Fluorescence-Guided Surgery, those who are the founders of the technology, it describes the accurate development history and cutting-edge techniques based on the knowledge accumulated over the years. This is a translated version of the book originally published in Japanese language. This has been facilitated using machine translation (by the service DeepL.com) followed by authors revising, editing and verifying the translated manuscript.
