ISBN	1-5015-0786-9 1-5015-0782-6
Descrizione fisica	1 online resource (308 pages)
Collana	Studies in ancient Near Eastern records ; ; Volume 20
Disciplina	935/.02
Soggetti	Babylon (Extinct city)-History-Sources Babylonia-Kings and rulers Iraq-Antiquities Iraq-History-To 634 HISTORY / Middle East / General Babylonia Kings and rulers Babylon (Extinct city) History Sources Iraq History To 634 Iraq Antiquities
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	Frontmatter -- Preface -- Contents -- Tables and Figures -- Conventions and Abbreviations -- 1. Introduction -- 2. The Sealand I in Babylonian historiography -- 3. Geographical and chronological considerations -- 4. A political history of the Sealand kingdom -- 5. The Sealand I palatial economy -- 6. The Sealand I pantheon and religious history -- 7. Conclusion -- Appendix 1: BKL A and Babylon I- Sealand I synchronism -- Appendix 2: Sealand I year names -- Appendix 3: Text numbers corresponding to Table -- Bibliography -- Indexes
Sommario/riassunto	The history of mid-2nd millennium Babylonia is marked by a dire lack of sources. The Sealand kings who controlled part of it were long known to us only indirectly. A palatial archive published recently now illuminates this elusive polity from the inside. This book explores its

political, economic, and religious history, as well as the transmission of its memory. It forms a basis for interpreting future finds of that period in southern Iraq.

Sommario/riassunto	<p>The goal of marine spatial planning is to manage uses of marine space to reduce tensions between human activities and the health of marine ecosystems. This is a major and complex challenge, as oceans lie at the intersection of multiple and increasing interests: biodiversity conservation, climate change regulation, economic development, food security. This handbook takes an interdisciplinary, sustainability science approach to explore the potential and limitations of marine spatial planning, a tool developed in the Global North, and its current or possible future applications in the tropical South Atlantic - specifically in Brazil, Senegal and Cabo Verde. To protect our global ocean commons, communities of stakeholders need to transcend disciplinary boundaries and bring together diverse knowledge to move towards a shared goal of sustainability (part 1). The development of this collective intelligence in tropical marine ecosystem research must take into account local, national and international issues (part 2) and can be supported by innovative interdisciplinary tools (part 3). This handbook is aimed at decision-makers, researchers and, more</p>

generally, all users of marine areas, highlighting crucial points to consider when implementing marine spatial planning.
