Sommario/riassunto	Tibetan medicine has come to represent multiple and sometimes conflicting agendas. On the one hand it must retain a sense of cultural authenticity and a connection to Tibetan Buddhism; on the other it

must prove efficacious and safe according to biomedical standards. Recently, Tibetan medicine has found a place within the multibillion-dollar market for complementary, traditional, and herbal medicines as people around the world seek alternative paths to wellness. Healing Elements explores how Tibetan medicine circulates through diverse settings in Nepal, China, and beyond as commercial goods and gifts, and as target therapies and panacea for biophysical and psychosocial ills. Through an exploration of efficacy - what does it mean to say Tibetan medicine "works"? - this book illustrates a bio-politics of traditional medicine and the meaningful, if contested, translations of science and healing that occur across distinct social ecologies.

## Sommario/riassunto

Sacrifice is a well known form of ritual in many world religions. Although the actual practice of animal sacrifice was largely abolished in the later history of Judaism, Christianity and Islam, it is still recalled through biblical stories, the ritual calendar and community events. The essays in this volume discuss the various positions regarding the value of sacrifice in a wide variety of disciplines such as history, archaeology, literature, philosophy, art and gender and post-colonial studies. In this context they examine a wide array of questions pertaining to the 'actuality of sacrifice' in various social, historical and intellectual contexts ranging from the pre-historical to the post-Holocaust, and present new understandings of some of the most sensitive topics of our time.

#### Sommario/riassunto

This book constitutes the refereed proceedings of the 9th International Symposium on Stabilization, Safety, and Security of Distributed Systems, SSS 2007, held in Paris, France, November 14-16, 2007. The 27 regular papers presented together with the extended abstracts of 3 invited lectures were carefully reviewed and selected from 64 submissions. The papers address all aspects of self-stabilization, safety and security, recovery oriented systems and programming, from theoretical contributions, to reports of the actual experience of applying the principles of self-stabilization to static and dynamic systems.
