

1. Record Nr.	UNINA9910767588503321
Titolo	Sustainable Agriculture Reviews : Cereals // edited by Eric Lichtfouse, Aakash Goyal
Pubbl/distr/stampa	Cham : , : Springer International Publishing : , : Imprint : Springer, , 2015
ISBN	3-319-16988-2
Edizione	[1st ed. 2015.]
Descrizione fisica	1 online resource (218 p.)
Collana	Sustainable Agriculture Reviews, , 2210-4410 ; ; 16
Disciplina	641.331
Soggetti	Agriculture
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references at the end of each chapters and index.
Nota di contenuto	Drought and salt stress in cereals -- Precision nitrogen management for sustainable corn production -- Soil and crop management for sustainable agriculture -- Rice pest management and biological control -- Sustainable rice production -- Rice, wheat and maize biofortification -- Sorghum fungal diseases -- Sorghum health benefits -- Sorghum and millet seed systems in southern Africa -- Recent advances in cereals proteomics.
Sommario/riassunto	Sustainable agriculture is a rapidly growing field aiming at producing food and energy in a sustainable way for humans and their children. Sustainable agriculture is a discipline that addresses current issues such as climate change, increasing food and fuel prices, poor-nation starvation, rich-nation obesity, water pollution, soil erosion, fertility loss, pest control, and biodiversity depletion. Novel, environmentally-friendly solutions are proposed based on integrated knowledge from sciences as diverse as agronomy, soil science, molecular biology, chemistry, toxicology, ecology, economy, and social sciences. Indeed, sustainable agriculture decipher mechanisms of processes that occur from the molecular level to the farming system to the global level at time scales ranging from seconds to centuries. For that, scientists use the system approach that involves studying components and interactions of a whole system to address scientific, economic and social issues. In that respect, sustainable agriculture is not a classical,

narrow science. Instead of solving problems using the classical painkiller approach that treats only negative impacts, sustainable agriculture treats problem sources. Because most actual society issues are now intertwined, global, and fast-developing, sustainable agriculture will bring solutions to build a safer world.
