Sommario/riassunto	This book provides a practical guide in neuro-ophthalmology. It contains more than 80 carefully selected neuro-ophthalmic cases. It covers visual afferent (Part 1) and efferent disorders (Part 2): the various optic neuropathies, diplopia from ocular and neurologic pathogen, pupil and lid abnormality. Each case presents with neuro-ophthalmology examination format, followed by ancillary test, final diagnose, treatment and prognosis. A short review or comment highlights the important points of these disorders, up to date progress and literature are addressed in part of them. The novel optical coherence tomography imaging technique is also introduced to

interpretation some visual pathway disorders and for follow-up. The massive photographs and neuro-imaging will help the reader for easy following. As a case-based practical manual, this book is a clinical reference for general ophthalmologist, neurologist, senior ophthalmology resident, specialist and fellow, and physician who are interested in neuro-ophthalmology field.
