

1. Record Nr.	UNINA9910808419903321
Autore	Swaffield J. A. <1943->
Titolo	Transient airflow in building drainage systems // John Swaffield
Pubbl/distr/stampa	Abingdon, Oxon ; ; New York : , : Spon Press, , 2010
ISBN	1-134-00696-9 1-134-00697-7 1-282-59559-8 9786612595592 0-203-87975-9
Descrizione fisica	1 online resource (359 p.)
Disciplina	696.1
Soggetti	Plumbing - Waste-pipes - Simulation methods Drainage - Simulation methods Ventilation - Simulation methods Air flow - Simulation methods
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and indexes.
Nota di contenuto	1. Building drainage and vent systems, a traditional building service requiring an engineering analysis makeover? -- 2. Pressure transient propagation in building drainage and vent systems -- 3. Mathematical basis for the simulation of low amplitude air pressure transients in vent systems -- 4. Simulation of the basic mechanisms of low amplitude air pressure transient propagation : AIRNET applications -- 5. Pressure surge as a source of system failure, leading to the development of control and suppression strategies -- 6. Application of the Method of characteristics based simulation to a series of case studies -- 7. Airflow applications of the Method of characteristics simulation techniques -- 8. The role of national codes in drainage and vent system design.
Sommario/riassunto	"Giving you the first comprehensive presentation of the ground breaking research undertaken at Heriot Watt University, with Research Council and industrial funding, this book brings a new perspective to the design of building drainage and vent systems. It provides the building services community with clear and verifiable design methods

that will be robust enough to meet challenges such as climate change and water conservation; population migration to the mega cities of the developing world, and the consequent pressures of user concentration; the rise of the prestige building and the introduction of new appliances and control strategies. These all combine to make traditional codified design guidance insufficient. Many assumptions in existing codes defining the entrained airflows within building drainage vent systems cannot be theoretically supported, so designers concerned with these systems need analysis and simulation capabilities which are at least as reliable as those enjoyed by other building services practitioners. The Method of Characteristics solution techniques which are well established in the pressure surge field are now used to provide solutions for drainage designers. The material is applied to a whole range of abstract scenarios then to a series of real world applications including the forensic modelling of the SARS virus spread within Amoy Gardens in 2003 and the refurbishment of the O2 Dome. Applications to specialised services, including underground station drainage and highly infectious disease treatment facilities are discussed and demonstrated, alongside the use of design and simulation techniques in support of product development. Aimed at both professional and academic users, this book serves both as a design aid and as a core text for specialist masters courses in public health and building services engineering"--Provided by publisher.

2. Record Nr.	UNINA9910768392303321
Autore	Mesguich Veronique
Titolo	Les bibliotheques face au monde des donnees // Veronique Mesguich ; preface d'Emmanuelle Bermes
Pubbl/distr/stampa	Villeurbanne, France, : Presses de l'enssib, 2023
ISBN	9782375461488 2375461487
Descrizione fisica	1 online resource (192 p.)
Soggetti	Library information networks Libraries and the Internet Library metadata Libraries - Data processing Data curation in libraries Information storage and retrieval systems - Libraries Metadata Linked data Semantic Web
Lingua di pubblicazione	Francese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	<p>""Penser donnees?' Pourquoi et comment? Tel est le defi, le nouveau paradigme, qui s'impose depuis trois decennies aux professionnels de l'information et des bibliotheques, et au-dela a l'ensemble de la societe numerique et du marche du travail. Etaye par un propos clair, structure et pedagogique, cet ouvrage de reference, tres attendu par la profession, nous livre une vision panoramique synthetique aussi complete qu'accessible des enjeux de la donnee dans les organisations: bibliotheques dans la cite ou dans l'universite. Preface par Emmanuelle Bermes, ecrit par Veronique Mesguich, experte des enjeux de l'information et des strategies numeriques, ce vade-mecum permettra aux filieres de l'information et du numerique, aux etudiants en preparation de concours comme aux tutelles de l'enseignement</p>

superieur et de la recherche et des collectivites territoriales qui portent les politiques de gestion de la donnee, d'acquies les indispensables codes, les competences de base et les methodes d'appropriation pour apprehender pas a pas et avec confiance le vaste monde des donnees. Avec l'objectif d'aborder l'ensemble des enjeux professionnels, de la transition bibliographique, du web semantique, des donnees d'usage, de l'open data et l'open science, des donnees et metadonnees de la recherche, l'ambition de l'ouvrage est avant tout d'eclairer chaque face du monde des donnees, des technologies mobilisees aux politiques publiques, des legislations en vigueur aux acteurs en presence et aux organisations pilotes, pour se conclure sur une cartographie des metiers et des competences, sans jamais se departir d'un esprit critique sur les biais, les limites et les risques ethiques de la gouvernance par les donnees"--Page 4 of cover.
