1. Record Nr.   UNINA9910768455703321

   Titolo   Algorithms in Bioinformatics : Third International Workshop, WABI
                     2003, Budapest, Hungary, September 15-20, 2003, Proceedings / /
                     edited by Gary Benson, Roderic Page

   Pubbl/distr/stampa Berlin, Heidelberg : , : Springer Berlin Heidelberg : , : Imprint : Springer,
                     , 2003

   ISBN   3-540-39763-9

   Edizione   [1st ed. 2003.]

   Descrizione fisica 1 online resource (X, 534 p.)

   Collana   Lecture Notes in Bioinformatics ; ; 2812

   Disciplina   572.8/0285

   Soggetti   Life sciences
                     Computer programming
                     Algorithms
                     Data structures (Computer science)
                     Computers
                     Computer science—Mathematics
                     Life Sciences, general
                     Programming Techniques
                     Algorithm Analysis and Problem Complexity
                     Data Structures
                     Computation by Abstract Devices
                     Mathematics of Computing

   Lingua di pubblicazione Inglese

   Formato   Materiale a stampa

   Livello bibliografico Monografia

   Note generali   Bibliographic Level Mode of Issuance: Monograph

   Nota di bibliografia Includes bibliographical references and index.

   Nota di contenuto Comparative Genomics -- A Local Chaining Algorithm and Its
                     Applications in Comparative Genomics -- Common Intervals of Two
                     Sequences -- A Systematic Statistical Analysis of Ion Trap Tandem
                     Mass Spectra in View of Peptide Scoring -- Vector Seeds: An Extension
                     to Spaced Seeds Allows Substantial Improvements in Sensitivity and
                     Specificity -- Gene Finding and Expression -- A Stochastic Approach to
                     Count RNA Molecules Using DNA Sequencing Methods -- A Method to
                     Detect Gene Structure and Alternative Splice Sites by Agreeing ESTs to a
                     Genomic Sequence -- Optimal DNA Signal Recognition Models with a

Fixed Amount of Intrasignal Dependency -- Genome Mapping -- New Algorithm for the Simplified Partial Digest Problem -- Noisy Data Make the Partial Digest Problem NP-hard -- Pattern and Motif Discovery -- Pattern Discovery Allowing Wild-Cards, Substitution Matrices, and Multiple Score Functions -- A Combinatorial Approach to Automatic Discovery of Cluster-Patterns -- Dynamic Programming Algorithms for Two Statistical Problems in Computational Biology -- Phylogenetic Analysis -- Consensus Networks: A Method for Visualising Incompatibilities in Collections of Trees -- Efficient Generation of Uniform Samples from Phylogenetic Trees -- New Efficient Algorithm for Detection of Horizontal Gene Transfer Events -- Ancestral Maximum Likelihood of Evolutionary Trees Is Hard -- A Linear-Time Majority Tree Algorithm -- Bayesian Phylogenetic Inference under a Statistical Insertion-Deletion Model -- Better Hill-Climbing Searches for Parsimony -- Computing Refined Buneman Trees in Cubic Time -- Distance Corrections on Recombinant Sequences -- Parsimonious Reconstruction of Sequence Evolution and Haplotype Blocks -- Polymorphism -- Identifying Blocks and Sub-populations in Noisy SNP Data -- Designing Optimally Multiplexed SNP Genotyping Assays -- Minimum Recombinant Haplotype Configuration on Tree Pedigrees -- Protein Structure -- Efficient Energy Computation for Monte Carlo Simulation of Proteins -- Speedup LP Approach to Protein Threading via Graph Reduction -- Homology Modeling of Proteins Using Multiple Models and Consensus Sequence Alignment -- Side-Chain Structure Prediction Based on Dead-End Elimination: Single Split DEE-criterion Implementation and Elimination Power -- Sequence Alignment -- A Large Version of the Small Parsimony Problem -- Optimal Multiple Parsimony Alignment with Affine Gap Cost Using a Phylogenetic Tree -- Composition Alignment -- String Algorithms -- Match Chaining Algorithms for cDNA Mapping -- Sequencing from Compomers: Using Mass Spectrometry for DNA De-Novo Sequencing of 200+ nt -- Bounds for Resequencing by Hybridization -- Selecting Degenerate Multiplex PCR Primers.

Sommario/riassunto	We are pleased to present the proceedings of the Third Workshop on Algorithms in Bioinformatics (WABI 2003), which took place on September 15-20, 2003 in Budapest, Hungary. The WABI workshop was part of the four-conference meeting, ALGO 2003, which was locally organized by Dr. Jan ´os Csirik, Head of the Department of Computer Science, J´ozsef Attila University, Budapest. See http://www.conferences. hu/ALGO2003/algo_2003. htmfor more details. WABI focuses on discrete algorithms that address important problems in molecular biology, genomics, and genetics, that are founded on sound models, that are computationally e'cient, that have been implemented and tested in simulations and on real datasets, and that provide new biological results. The workshopgoalsareto presentrecentresearchandidentify andexploredirections for future research. We received78 submissionsin responseto the call for papers and 36 were- cepted. We wouldliketo sincerelythank the authorsof allsubmitted papers and the conference participants. We especially thank a terri'c program committee for their diligent and thorough work in reviewing and selecting the papers.
