Economy of Protection Structure in Korea -- 14. Government Policy and Strategic Industries: The Case of Taiwan -- 15. Export-Oriented Growth and Equity in Korea -- Contributors -- Author Index -- Subject Index

Sommario/riassunto

During the first three decades following the Second World War, an increasingly open international trading system led to unprecedented economic growth throughout the world. But in recent years, that openness has been threatened by increased protectionism, regional trading arrangements-Europe 1992 and the U.S.-Canada Free Trade Agreement-and setbacks in negotiations on the General Agreement on Tariffs and Trade. In Trade and Protectionism, American and East Asian scholars consider the dangers of this trend for the world economy and especially for East Asian countries. The authors look at the current global trading system and at the potential threats to East Asian economies from possible regional arrangements, such as separate trading blocks in the Western Hemisphere and Europe. They cover trade between the United States and Japan, Korea and Japan, and Japanese-East Asian trade policies; trade in agriculture and semiconductors and the frictions that have jeopardized this trade; and direct foreign investment. The contributors round out the work with discussions of the political economy of protection in Korea and Taiwan and political economy considerations as they affect trade policy in general. This is the second volume of the National Bureau of Economic Research-East Asia Seminar on Economics. The first volume, The Political Economy of Tax Reform, also edited by Takatoshi Ito and Anne O. Krueger, addresses tax reform in the global economy.

Sommario/riassunto	Modern macroeconomics suffers from an unclear link between short-term Keynesian analysis and long-term growth modelling. Moreover, product and process innovations have been only partially integrated. The analysis suggests new approaches to innovations in open economies in many ways, including the Schumpeterian Mundell-Fleming model and new monetary growth models. A specific focus is on the role of innovations for output, employment and exchange rate

developments. A new link between monetary analysis and growth modelling in open economies is presented. Structural change, innovations and growth are considered from a new perspective. Energy innovation dynamics are also considered. With respect to economic policy - in particular innovation policy - the analysis implies major changes, concerning both EU countries and other leading OECD economies. This important new book sets a new direction for macroeconomics. By linking several strands of fundamental economic thinking into a coherent, integrated framework it provides a pathbreaking understanding into the fundamental forces shaping macroeconomic performance. In particular, by injecting insights from the Schumpeterian model, the author succeeds in presenting a new policy framework to guide economic growth policy. Prof. Dr. David Audretsch, Institute of Development Strategies, Indiana University, Bloomington, USA.
