| Edizione | [1st ed. 2008.] |
| Descrizione fisica | 1 online resource (352 p.) |
| Collana | Current Plant Science and Biotechnology in Agriculture, , 0924-1949 ; ; 42 |
| Disciplina | 572.545 589 |
| Soggetti | Microbiology Agriculture Microbial genetics Microbial genomics Plant biochemistry Microbial ecology Microbial Genetics and Genomics Plant Biochemistry Microbial Ecology |
| Lingua di pubblicazione | Inglese |
| Formato | Materiale a stampa |
| Livello bibliografico | Monografia |
| Note generali | Description based upon print version of record. |
| Nota di bibliografia | Includes bibliographical references and author index. |
| Nota di contenuto | From the contents Preface. Dedication. Keynote Lecture -- Section 1. Towards Sustainable Agriculture. A. Crop Improvement and Sustainable Agriculture for Poverty Alleviation. B. Use of Inoculants. C. Tree Legumes and Forestry. E. Summary Presentations -- Section 2. Nodule Organogenesis and Plant Genomics. A. Host Response to Invasion. B. Nodule Physiology and Genetics. C. Plant Genomics and |

Transcriptomics. D. Bacterial Partner. E. Summary Presentations --
Section 3. Microbiology of Nitrogen Fixation. A. Genomics, Phylogeny,
and Evolution. B. Rhizosphere Associations. C. Enzymology and Genetics.
D. Photosynthetic Nitrogen Fixers. E. Summary Presentations -- Author
Index.

Sommario/riassunto

This volume covers recent developments in both fundamental and applied research in biological nitrogen fixation. It emphasizes the application of biological nitrogen fixation for sustainable agriculture, which should lead to poverty alleviation, environmental protection, and good agricultural practices generally. The roles of, and advances in, plant breeding, plant molecular biology, nodule physiology, and symbiotic and associative interactions between plants and microbes in sustaining agricultural productivity and soil fertility are described. The evolution of symbioses and nitrogen fixation are also covered in this volume. To ensure high agricultural productivity, while protecting the environment (both soil and water resources), requires plant cultivars that also respond to beneficial microbes. The volume, therefore, describes the physiology and genomics of nitrogen-fixing bacteria together with the biochemistry and molecular genetics of the nitrogenase enzyme that actually fixes atmospheric nitrogen to a usable form. This volume, which covers the most recent data on the role of nitrogen fixation in agriculture and forestry and on the biology of both plants and nitrogen-fixing microbes, is intended to serve as a useful reference for students and researchers, both in the laboratory (academic and commercial) and in the field.
