Record Nr. Autore Titolo Pubbl/distr/stampa	UNINA9910777638803321 Sweet William Kicking the carbon habit [[electronic resource]] : global warming and the case for renewable and nuclear energy / / William Sweet New York, : Columbia University Press, c2006
ISBN	0-231-51037-3
Descrizione fisica	1 online resource (267 p.)
Disciplina	333.79/4
Soggetti	Renewable energy sources Power resources Global warming
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Bibliographic Level Mode of Issuance: Monograph
Nota di bibliografia	Includes bibliographical references (p. [237]-239) and index.
Nota di contenuto	Front matter Contents Preface 1. The Case for Sharply Cutting U.S. Greenhouse Gas Emissions Part I. Coal: A Faustian Bargain with Payments Coming Due 2. The Basis of It All: Pennsylvania in the Pennsylvanian 3. The Air we Breathe: The Human Costs of Coal Combustion 4. From Outer Space: Asia's Brown Cloud, and More Part II. Climate: The Lockstep Relationship Between Carbon Dioxide and Temperature 5. The Drillers 6. The Modelers 7. The Synthesizers Part III. Choices: The Low-Carbon and Zero-Carbon Technologies we can Deploy Right Now 8. Breaking the Carbon Habit 9. Going All Out for Renewables, Conservation, and Green Design 10. Natural Gas, Gasoline, and the Vision of a Hydrogen Economy 11. A Second Look at Nuclear Energy Conclusion: How to Reduce Greenhouse Gases Now, Using Today's Technology Acknowledgments Notes Bibliography Index
Sommario/riassunto	With glaciers melting, oceans growing more acidic, species dying out, and catastrophic events like Hurricane Katrina ever more probable, strong steps must be taken now to slow global warming. Further warming threatens entire regional economies and the well being of whole populations, and in this century alone, it could create a global cataclysm. Synthesizing information from leading scientists and the most up-to-date research, science journalist William Sweet examines

1.

what the United States can do to help prevent climate devastation. Rather than focusing on cutting oil consumption, which Sweet argues is expensive and unrealistic, the United States should concentrate on drastically reducing its use of coal. Coal-fired plants, which currently produce more than half of the electricity in the United States, account for two fifths of the country's greenhouse gas emissions of carbon dioxide into the atmosphere. Sweet believes a mixture of more environmentally sound technologies-wind turbines, natural gas, and nuclear reactors-can effectively replace coal plants, especially since dramatic improvements in technology have made nuclear power cleaner, safer, and more efficient. Sweet cuts through all the confusion and controversies. He explores dramatic advances made by climate scientists over the past twenty years and addresses the various political and economic issues associated with global warming, including the practicality of reducing emissions from automobiles, the efficacy of taxing energy consumption, and the responsibility of the United States to its citizens and the international community to reduce greenhouse gases. Timely and provocative, Kicking the Carbon Habit is essential reading for anyone interested in environmental science, economics, and the future of the planet.
