Sommario/riassunto

The economic growth of China is clearly one of the defining trends of our time. The world's most populous nation is undergoing a vast transformation that will redefine the global economy. Chinese industrial production has increased tremendously in recent years, and its consumption of resources has necessarily gone way up as well. These developments will have important impacts on economics, business, politics, and environmental conditions throughout the world. In China's Dilemma: Economic Growth, the Environment, and Climate Change, an international group of authorities examines the present stat
