Sommario/riassunto

Disasters-natural ones, such as hurricanes, floods, or earthquakes, and unnatural ones such as terrorist attacks-are part of the American experience in the twenty-first century. The challenges of preparing for these events, withstanding their impact, and rebuilding communities afterward require strategic responses from different levels of government in partnership with the private sector and in accordance with the public will. Disasters have a disproportionate effect on urban places. Dense by definition, cities and their environs suffer great damage to their complex, interdependent social, environmental, and economic systems. Social and medical services collapse. Long-standing problems in educational access and quality become especially acute. Local economies cease to function. Cultural resources disappear. The plight of New Orleans and several smaller Gulf Coast cities exemplifies this phenomenon. This volume examines the rebuilding of cities and their environs after a disaster and focuses on four major issues: making cities less vulnerable to disaster, reestablishing economic viability, responding to the permanent needs of the displaced, and recreating a sense of place. Success in these areas requires that priorities be set cooperatively, and this goal poses significant challenges for rebuilding efforts in a democratic, market-based society. Who sets priorities and how? Can participatory decision-making be organized under conditions requiring focused, strategic choices? How do issues of race and class intersect with these priorities? Should the purpose of rebuilding be restoration or reformation? Contributors address these and other questions related to environmental conditions, economic imperatives, social welfare concerns, and issues of planning and design in light of the lessons to be drawn from Hurricane Katrina.

Sommario/riassunto	In early American society, one's identity was determined in large part by gender. The ways in which men and women engaged with their communities were generally not equal: married women fell under the legal control of their husbands, who handled all negotiations with the outside world, as well as many domestic interactions. The death of a husband enabled women to transcend this strict gender divide. Yet, as a widow, a woman occupied a third, liminal gender in early America, performing an unusual mix of male and female roles in both public and

private life. With shrewd analysis of widows' wills as well as prescriptive literature, court appearances, newspaper advertisements, and letters, *The Widows' Might* explores how widows were portrayed in early American culture, and how widows themselves responded to their unique role. Using a comparative approach, Vivian Bruce Conger deftly analyzes how widows in colonial Massachusetts, South Carolina, and Maryland navigated their domestic, legal, economic, and community roles in early American society.
