Sommario/riassunto

Argentina's youth are an important, but to a certain extent untapped, resource for development. Over 2 million (31 percent) have already engaged in risky behaviors, and another 1 million (15 percent) are exposed to risk factors that are correlated with eventual risky behaviors. This totals 46 percent of youth at some form of risk. This book addresses the risks faced by youth in Argentina as well as the policy options for addressing them.
