Titolo	Adolescent nutrition 2000-2017 : DHS data on adolescents age 15-19 // Rukundo Kambarami Benedict, Allison Schmale, Sorrel Namaste
Pubbl/distr/stampa	Rockville, Maryland, USA : , : ICF, , 2018
Descrizione fisica	1 online resource (xi, 75 pages) : color illustrations
Collana	DHS comparative reports ; ; no. 47
Soggetti	Demographic surveys - Statistical methods Health surveys - Statistical methods Teenagers - Nutrition Malnutrition in children Statistics.
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	"June 2018." "This publication was produced for review by the United States Agency for International Development (USAID)"--Cover.
Nota di bibliografia	Includes bibliographical references (pages 73-75).

Sommario/riassunto	"Once in a lifetime." The phrase comes up over and over from the people who worked on Peter Jackson's The Lord of the Rings. The film's seventeen Oscars, record-setting earnings, huge fan base, and hundreds of ancillary products attest to its importance and to the fact that Rings is far more than a film. Its makers seized a crucial moment in Hollywood-the special effects digital revolution plus the rise of "infotainment" and the Internet-to satisfy the trilogy's fans while fostering a huge new international audience. The resulting franchise of franchises has earned billions of dollars to date with no end in sight. Kristin Thompson interviewed seventy-six people to examine the movie's scripting and design and the new technologies deployed to produce the films, video games, and DVDs. She demonstrates the

impact Rings had on the companies that made it, on the fantasy genre, on New Zealand, and on independent cinema. In fast-paced, compulsively readable prose, she affirms Jackson's Rings as one the most important films ever made.

Sommario/riassunto

This book brings together papers presented at the 2023 The International Conference on Artificial Intelligence in China (ChinaAI), which provides a venue to disseminate the latest developments and to discuss the interactions and links between these multidisciplinary fields. Spanning topics covering all topics in Artificial Intelligence with new development in China, this book is aimed at undergraduate and graduate students in Electrical Engineering, Computer Science and Mathematics, researchers and engineers from academia and industry as well as government employees (such as NSF, DOD, DOE).
