

1. Record Nr.	UNINA9910778564503321
Autore	Hyder David Jalal <1964->
Titolo	The determinate world [[electronic resource] ] : Kant and Helmholtz on the physical meaning of geometry // by David Hyder
Pubbl/distr/stampa	Berlin ; ; New York, : Walter de Gruyter, 2009
ISBN	1-282-71672-7 9786612716720 3-11-021720-1
Descrizione fisica	1 online resource (238 p.)
Collana	Quellen und Studien zur Philosophie, , 0344-8142 ; ; Bd. 69
Classificazione	CF 5017
Disciplina	516 516.001
Soggetti	Geometry - Philosophy
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Frontmatter -- Contents -- 1. Introduction -- 2. The Empirical Determination of Physical Concepts in Kant's Metaphysical Foundations of Natural Science -- 3. Helmholtz on the Comprehension of Nature -- 4. Colour-theory and Manifolds -- 5. The Road to Empirical Geometry -- 6. Helmholtz on Geometry, 1868 - 1878 -- 7. Conclusion -- Backmatter
Sommario/riassunto	This book offers a new interpretation of Hermann von Helmholtz's work on the epistemology of geometry. A detailed analysis of the philosophical arguments of Helmholtz's <i>Erhaltung der Kraft</i> shows that he took physical theories to be constrained by a regulative ideal. They must render nature "completely comprehensible", which implies that all physical magnitudes must be relations among empirically given phenomena. This conviction eventually forced Helmholtz to explain how geometry itself could be so construed. Hyder shows how Helmholtz answered this question by drawing on the theory of magnitudes developed in his research on the colour-space. He argues against the dominant interpretation of Helmholtz's work by suggesting that for the latter, it is less the inductive character of geometry that makes it empirical, and rather the regulative requirement that the system of natural science be empirically closed.
