International Classification of Obsessive Compulsive Disorder App. III. Diagnostic Criteria for Obsessive Compulsive Disorder
Sommario/riassunto	"Obsessive compulsive disorder (OCD) is the term given to a condition characterized by recurring obsessive thoughts or actions. These thoughts or actions are involuntary and are often a response to a deep-rooted fear. This introductory book, richly illustrated with case examples, explains the nature and treatment of OCD in children and adolescents. OCD has been little discussed in relation to this age group, although it is now believed that approximately 1 per cent of all children and adolescents suffers from serious obsessive disorders."-- Jacket
