

1. Record Nr.	UNINA9910779253603321
Autore	Atalay Sonya <1968->
Titolo	Community-based archaeology [[electronic resource] ] : research with, by, and for Indigenous and local communities // Sonya Atalay
Pubbl/distr/stampa	Berkeley, : University of California Press, c2012
ISBN	1-280-88192-5 9786613723239 0-520-95346-0
Descrizione fisica	1 online resource (327 p.)
Disciplina	930.1
Soggetti	Community archaeology - United States Archaeology - Social aspects - United States Indians of North America - Antiquities - Conservation and restoration Cultural property - Protection - United States
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	A sustainable archaeology -- Origins of community-based research in archaeology -- Guiding principles of community-based participatory research -- Connecting with community research partners -- Building a strong foundation -- Identifying research questions and developing a research design -- Gathering data and sharing results -- Lasting effects.
Sommario/riassunto	Archaeology impacts the lives of indigenous, local, or descendant communities. Yet often these groups have little input to archaeological research, and its results remain inaccessible. As archaeologists consider the consequences and benefits of research, the skills, methodologies, and practices required of them will differ dramatically from those of past decades. As an archaeologist and a Native American, Sonya Atalay has investigated the rewards and complex challenges of conducting research in partnership with indigenous and local communities. In Community-Based Archaeology, she outlines the principles of community-based participatory research and demonstrates how CBPR can be effectively applied to archaeology. Drawing on her own experiences with research projects in North

America and the Near East, Atalay provides theoretical discussions along with practical examples of establishing and developing collaborative relationships and sharing results. This book will contribute to building an archaeology that is engaged, ethical, relevant, and sustainable.
