Sommario/riassunto	Environmental issues, global warming, pollution, and chemical dumping, are ever present in the news. But what about the health problems these issues pose? Frank Spellman and Melissa Stoudt identify the hazardous environmental issues and explain the science behind the dangers to our health in a clear and accessible style. They not only address the environmental issues, but also the practices that support and harm the human life and population. Lastly, they identify and offer possible solutions to controlling the factors that harm our health.
