Assessment in Private-Sector Rehabilitation / Rigel Macarena Pinon -- Section IV Issues in Assessment -- 15. Testing Accommodations / Phillip D. Rumrill -- 16. Test Score Bias and Validity in Person-Oriented

Sommario/riassunto

This graduate-level text on rehabilitation and mental health counseling disseminates foundational knowledge of assessment principles and processes with a focus on clinical application. Written by recognized leaders in rehabilitation and mental health, it is the only book to use the World Health Organization's International Classification of Functioning, Disability and Health (ICF) framework to integrate assessment tools and techniques addressing practice with varied populations and settings. Written by leading practitioners with specialized knowledge, chapters focus on specific populations and service delivery settings. The book features a variety of learning tools to foster critical thinking, including learning objectives and case examples highlighting important principles and applications. Sample reports and templates further reinforce understanding of specific applications. A robust instructor package offers PowerPoints, a test bank including discussion questions, and sample syllabi. Purchase includes access to the ebook for use on most mobile devices and computers.

KEY FEATURES

- Provides the only comprehensive view of assessment in rehabilitation and mental health using the ICF framework
- Integrates assessment tools and techniques for both rehabilitation and mental health in diverse settings
- Written by recognized leaders in the field of rehabilitation and mental health
- Includes learning objectives and case examples highlighting important principles and applications
- Presents sample report templates and completed reports to strengthen integration and presentation of test results
- Offers a robust instructor package with PowerPoints, a test bank including discussion questions, and sample syllabi

Soggetti	Risk management Natural disasters Climatic changes
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Title from publisher's bibliographic system (viewed on 05 Oct 2015).
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	1. Climate change and natural disaster risk management -- 2. Climate change impacts on the insurance sector -- 3. Climate change and future costs of natural disasters -- 4. Climate change adaptation through insurance against flooding -- 5. Dealing with uncertainty in flood risk management -- 6. Damage mitigation measures at the household level and climate change adaptation -- 7. Insurance incentives for homeowners to invest in adaptation -- 8. Bounded rationality and demand for flood insurance -- 9. Individual perceptions of flood risk -- 10. Willingness-to-pay (WTP) for insurance against low-probability flood risks -- 11. Market shares of insurance against flood risk under climate change scenarios -- 12. Conclusions.
Sommario/riassunto	In recent years, the damage caused by natural disasters has increased

worldwide; this trend will only continue with the impact of climate change. Despite this, the role for the most common mechanism for managing risk - insurance - has received little attention. This book considers the contribution that insurance arrangements can make to society's management of the risks of natural hazards in a changing climate. It also looks at the potential impacts of climate change on the insurance sector, and insurers' responses to climate change. The author combines theory with evidence from the rich experiences of the Netherlands together with examples from around the world. He recognises the role of the individual in preparing for disasters, as well as the difficulties individuals have in understanding and dealing with infrequent risks. Written in plain language, this book will appeal to researchers and policy-makers alike.
