Sommario/riassunto	Karl Llewellyn described Thomas Scruton as 'the greatest English-speaking commercial judge of a century'. Scruton played a key role in a number of politically sensitive court cases from the Great War to the 1930s. This biography draws on unpublished sources to evaluate his contribution as counsel, campaigner and judge in a number of areas: the development of a modern law of copyright; the checking of executive power in and after the Great War; and his attempt to develop English commercial law on a basis which reflected the practices and expectations of the commercial community. In addition to providing valuable insights into the nature of legal practice and advancement in

the Victorian and Edwardian eras, the book examines Llewellyn's claim that Scruton adopted a 'realist' approach to the development of commercial law, and uses the body of Scruton's judgments to explore the limits of a 'realist' approach to jurisprudence.

Sommario/riassunto

Traditionally, architecture has been preoccupied with the resolution of form. That concern helps to make photogenic buildings, which have received a great deal of attention. This book looks instead at the idea of the flows, which connects things together and moves between things. It is more difficult to discuss, but more necessary, because it is what makes things work. Architects have to think about flow - the flow of people through buildings, the flow of energy into buildings, and waste out of them - but usually the effects of flow do not find expression. The essays gathered here present a
