Sommario/riassunto	Are all immigrants from the same home country best understood as a homogeneous group of foreign-born? Or do they differ in their adaptation and transnational ties depending on when they emigrated and with what lived experiences? Between Castro's rise to power in

1959 and the early twenty-first century more than a million Cubans immigrated to the United States. While it is widely known that Cuban emigres have exerted a strong hold on Washington policy toward their homeland, Eckstein uncovers a fascinating paradox: the recent arrivals, although poor and politically weak, have done more to tra

Sommario/riassunto

Today, quantum field theory (QFT)-the mathematical and conceptual framework for contemporary elementary particle physics-is the best starting point for analysing the fundamental building blocks of the material world. QFT if taken seriously in its metaphysical implications yields a picture of the world that is at variance with central classical conceptions. The core of Kuhlmann's investigation consists in the analysis of various ontological interpretations of QFT, e.g. substance ontologies as well as a process-ontological approach. Eventually, Kuhlmann proposes a dispositional trope ontology, a
