Sommario/riassunto

Life threatening cardiovascular conditions constitute up to fifty per cent of emergency admissions to hospital. Immediate and appropriate management is crucial. This authoritative text provides up to date guidance for cardiologists and general physicians faced with patients in a critical condition. Based on Oxford cardiologists' wide clinical experience, the individual chapters address the practical issues of managing patients during the acute phase, combining both evidence-based and practical approaches. The text is enhanced with schematic illustrations and real examples, boxed summaries,
