partial equilibrium assessment; Efficiency and distributional effects of ecotaxes in a CGE model for Italy; Competitiveness and convergence The consequences of technological innovation on employment in the European Union using an AGE approach The effect of deficit in a multicountry model with perfect mobility of capital; VAT and income tax reform; German income tax reforms: separating efficiency from redistribution; Are destination and origin principles equivalent? A quantitative evaluation for the European Union; Welfare effects of VAT rate harmonisation in the European Union; Index

Sommario/riassunto

The papers in this much-needed collection employ Applied General Equilibrium methodology to address a wide variety of concerns within the European Union. Contributors examine five main policy areas: * international market integration * policy simulations with alternative treatments of factor markets * policies for carbon dioxide abatement * competitiveness and convergence * VAT and income tax reform.
