Sommario/riassunto	"Serviceability failures of concrete structures involving excessive cracking or deflection are relatively common, even in structures that comply with code requirements. This is often as a result of a failure to adequately account for the time-dependent deformations of concrete in the design of the structure. The serviceability provisions embodied in codes of practice are relatively crude and, in some situations, unreliable and do not adequately model the in-service behaviour of structures. In particular, they fail to adequately account for the effects of creep and

shrinkage of the concrete. Design for serviceability is complicated by the non-linear and inelastic behaviour of concrete at service loads. Providing detailed information, this book helps engineers to rationally predict the time-varying deformation of concrete structures under typical in-service conditions. It gives analytical methods to help anticipate time-dependent cracking, the gradual change in tension stiffening with time, creep induced deformations and the load independent strains caused by shrinkage and temperature changes. The calculation procedures are illustrated with many worked examples. A vital guide for practising engineers and advanced students of structural engineering on the design of concrete structures for serviceability and provides a penetrating insight into the time-dependent behaviour of reinforced and prestressed concrete structures."--Provided by publisher.

Sommario/riassunto	Contributing to debates on feminism, this book considers the impact made by feminists in India from the 1970's. Geetanjali Gangoli analyses campaigns on issues of violence and women's rights, and debates on ways in which feminist legal debates may be limiting for women and based on exclusionary concepts such as citizenship, and sets them within a wider analysis of the position of women within the Indian state.

### Sommario/riassunto

This edited collection examines time and its relationship to and impact upon media industries, studying how the media industry views time and makes business and economic decisions based on considerations of time. Contributions from an international set of authors analyze time constraints and competition between different media; the quantity and quality of time spent in media consumption, audience and readership time valuation/costing/pricing; and the emergence of new media businesses around individual time management. Specific topics examined in the volume include: \* a philos
