Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and indexes.
Nota di contenuto	THE ACQUISITION OF TEMPORALITY IN A SECOND LANGUAGE; Editorial page; Title page; Copyright page; Table of contents; Preface; Acknowledgement; 1. Introduction; 2. Frame of analysis; 3. The acquisition of English; 4. The acquisition of German; 5. The acquisition of Dutch; 6. The acquisition of French; 7. The acquisition of Swedish; 8. Conclusions; Author index; Subject index
Sommario/riassunto	This is the second volume of the SiBil series to present results from the European Science Foundation's project 'Second language acquisition by adult immigrants'. It deals specifically with the acquisition of temporality in five European languages: Dutch, English, French, German and Swedish, providing a detailed account of how adult learners who have little or no exposure to classroom teaching, express temporality at any given stage of the acquisition process, how they proceed from one stage to the next, and what factors determine both their progress and their final levels of proficiency. The

Sommario/riassunto	<p>It is our great pleasure to welcome you to the 2017 International Workshop on Multimedia Verification (MuVer'17) at the ACM Multimedia Conference. Multimedia, especially material that also includes video content, is a very powerful means for the spreading of information via different distribution channels (e.g. social networks, online, broadcasting). This is especially the case when it comes to obtaining timely information about what is happening directly around us, or elsewhere in the world (think of the recent terror attacks, natural disasters, celebrity events and such like). The digital media revolution and the convergence of social media with wired and wireless broadband connectivity have already brought breaking news to a multitude of digital platforms, both traditional and comparatively new ones. Furthermore, news organizations delivering information by web streams and TV broadcast (be it traditional organizations or newly established ones, the latter being primarily web-based) increasingly rely on user-generated multimedia recordings of breaking and developing news events shared by others in social networks for reporting or illustrating a story. However, there is not only richness and expressiveness of information in user-generated multimedia content; there is also a high risk of deception and misinformation (e.g.</p>

deliberately misleading information, such as propaganda). Access to increasingly sophisticated multimedia editing and content management tools, and the ease with which fake information spreads in electronic networks, means that news outlets and social platforms that wish to become or remain reputable, as well as amateurs re-publishing multimedia items (e.g. bloggers), need to carefully verify third party content before they (re-)publish and share it. This is vital in order to break news quickly, but not at the expense of accuracy and factuality. Furthermore, individual consumers of TV and online social media and multimedia sharing services are increasingly aware of the risk of deception that exists in media sharing and dissemination. That is why more and more people are (gradually) becoming interested in and aware of simple ways of understanding what to trust, how to assess the veracity of information, and how to debunk fake or misleading content. The goal of MuVer'17 is to bring together multimedia and video processing researchers, social media researchers, digital multimedia forensics experts, new media professionals, as well as multimedia and social sharing platform representatives, in an interdisciplinary forum for presenting and discussing the latest advances and open challenges in multimedia verification.

## Sommario/riassunto

Globalization and structural adjustment offer many opportunities for export orientated industrialization in developing economies. As a group, competitiveness in the developing countries has improved, but, while East Asian economies have had rapid export growth and technological upgrades, South Asian and African economies have lagged behind. Old structures, institutions, behavioural patterns and public policies are ill-adapted to deal with the challenges posed by technological change and economic liberalization. Consequently there is an urgent need for change in government and private sector at
