| Sommario/riassunto      | Behavioral medicine has now matured as a field to the point where all recognize that different populations are presented with different issues. Psychological reactions and patterns affect the health and well-being of children, as well as adults, and numerous standardized instruments for the assessment of a variety of areas of children's functioning are currently available. Yet, it can be difficult for practitioners and researchers searching through general compendia of resources for child assessment--which are frequently focused on general techniques rather than specific instruments--to identi |
