Sommario/riassunto	This book has two main goals: the re-establishment of a rule-based phonology as a viable alternative to current non-derivational models and the rehabilitation of historical evidence as a focus of phonological theory. Although Lexical Phonology includes several constraints such as the Derived Environment Condition and Structure Preservation, intended to reduce abstractness, previous versions have not typically exploited these fully. The model of Lexical Phonology presented here

imposes the Derived Environment Condition strictly; introduces a new constraint on the shape of underlying representations; excludes underspecification; and suggests an integration of Lexical Phonology with Articulatory Phonology.
