Sommario/riassunto	This thought-provoking book, the first of its kind in the English language, reexamines the fifty-year-old nation of Israel in terms of its origins as a haven for a persecuted people and its evolution into a multi-cultural society. Arguing that the mono-cultural regime built during the 1950's is over, Baruch Kimmerling suggests that the Israeli state has divided into seven major cultures. These seven groups, he contends, have been challenging one other for control over resource

distribution and the identity of the polity. Kimmerling, one of the most prominent social scientists and political analysts of Israel today, relies on a large body of sociological work on the state, civil society, and ethnicity to present an overview of the construction and deconstruction of the secular-Zionist national identity. He shows how Israeliness is becoming a prefix for other identities as well as a legal and political concept of citizen rights granted by the state, though not necessarily equally to different segments of society.

Sommario/riassunto	Concerns relating to energy supply and climate change have driven renewable energy targets around the world. Marine renewable energy could make a significant contribution to reducing greenhouse gas emissions and mitigating the consequences of climate change, while providing a high-technology industry. The conversion of wave and tidal energy into electricity has many advantages. Individual tidal and wave energy devices have been installed and proven, with commercial arrays planned throughout the world. The wave and tidal energy industry has developed rapidly in the past few years; therefore, it seems timely to review current research and map future challenges. Methods to improve understanding of the resource and interactions (between energy extraction, the resource and the environment) are considered, such as resource characterisation (including electricity output), design

considerations (e.g., extreme and fatigue loadings) and environmental impacts, at all timescales (ranging from turbulence to decadal) and all spatial scales (from device and array scales to shelf sea scales).
