Sommario/riassunto	The second edition of Health Insurance Resources: A Guide for People with Chronic Disease and Disability continues to be a uniquely helpful reference for those who need and use health insurance most often but have the least access to it. The book was developed to assist individuals living with disability and chronic health conditions, as well as health care professionals, in understanding the health care system and maximizing their rights and entitlements within that system. The manual is completely updated throughout, and reflects the changes in

Sommario/riassunto	In the mid-1870s, the experimental therapy of lamb blood transfusion spread like an epidemic across Europe and the USA. Doctors tried it as a cure for tuberculosis, pellagra and anemia; proposed it as a means to reanimate seemingly dead soldiers on the battlefield. It was a contested therapy because it meant crossing boundaries and challenging taboos. Was the transfusion of lamb blood into desperately sick humans really defensible? The book takes the reader on a journey into hospital wards and lunatic asylums, physiological laboratories and 19th century wars. It presents a fascinating story of medical knowledge, ambitions and concerns - a story that provides lessons for current debates on the morality of medical experimentation and care.

O-Ton: »When Lamb-to-Human Blood Transfusions Were All the Rage«
