

1. Record Nr.	UNINA9910780638203321
Autore	Hall Clarence A
Titolo	Introduction to the geology of southern California and its native plants / Clarence A. Hall, Jr. ; photography by Lauri L. Holbrook
Pubbl/distr/stampa	Berkeley, : University of California Press, c2007
ISBN	1-282-35913-4 9786612359132 0-520-93326-5
Descrizione fisica	1 online resource (545 p.)
Altri autori (Persone)	HolbrookLauri L
Disciplina	557.94/9
Soggetti	Geology - California, Southern Endemic plants - California, Southern
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references (p. 419-432) and indexes.
Nota di contenuto	pt. 1. Introduction -- pt. 2. The earth and geologic time -- pt. 3. Southern California through geologic time -- pt. 4. Geology and botany of southern California's geomorphic provinces -- pt. 5. Botany and plant families.
Sommario/riassunto	With its active fault systems, complex landforms, and myriad natural habitats, southern California boasts a rich and dynamic geologic environment. This abundantly illustrated volume at last provides an up-to-date, authoritative, and accessible resource for students and general readers interested in southern California's geology and native plants. Covering an extensive area, north from San Diego to Yosemite in the Sierra Nevada and east to the Mojave and Colorado deserts, its unique, comprehensive approach brings together for the first time the basic principles of geology, the story of plate tectonics, in-depth discussion of the geology of many specific locales within the region, and information on identifying southern California's native plants.
