	Sommario/riassunto	This timely book is the first complete descriptive grammar of Lillooet,

an indigenous Canadian language spoken in British Columbia, now threatened with extinction. The author discusses three major aspects of the language - sound system, word structure, and syntax - in great detail. The classical structuralism method of analysis, as developed in North America by Leonard Bloomfield and his followers, is used to look at every aspect of Lillooet in terms of its function and position within the whole structure of the language. Van Eijk explains terms and procedures in order to make the book accessible not only to the advanced linguist, but also to the undergraduate student with basic linguistic training. Written with great clarity, and well organized, the book is illustrated with copious examples drawn from many years of fieldwork in St'át'imc territory. A fully analysed and translated Lillooet text is included in an appendix to illustrate the grammatical patterns discussed in the main body. A second appendix has a conversion table comparing the standard Amerindian orthography used in the book with the practical orthography used in Lillooet-speaking communities. The Lillooet Language is an invaluable addition to other recent studies of neighbouring Salish languages such as Squamish, Halkomelem, Thompson, and Shuswap. It could be used both as a textbook for studies in the structure of a selected language, and as collateral reading for courses in phonology, morphology and syntax.

   Nota di contenuto Part One: Introduction -- 1. Exploring Chinese Ethical and Legal Perspectives on Automated Vehicles -- Part Two: Chinese Ethical

Accounts -- 2. Automated Vehicles, Human-Machine Relation, and Ethics: A Daoist View -- 3. Algorithmic Morality and Moral Decision Making for Automated Vehicles: A Confucian Account -- 4. "I must Have a Steering Wheel in My Automated Car to Protect My Family": A Confucian Ethical Reflection on Programming Automated Vehicles -- 5. Automated Vehicles, Privacy Protection, and Ethics: A Comparing Study on Western Theories and Confucianism -- Part Three: Chinese Legal Accounts -- 6. Navigating the Evolving Risk Landscape of Automated Driving: Regulatory Approaches and Challenges -- 7. Exploring a Suitable Legal Framework of Civil Liability for Automated Vehicle Accidents -- 8 Data Governance Rules in the Context of Connected Vehicles -- Part Four: A Survey Report -- 9. Chinese People's Preferences for Automated Vehicle Designs: A Survey Findings Report in Hong Kong and Shenzhen.

| Sommario/riassunto | This book explores the significance of automated vehicles from a Chinese perspective, bringing a wide range of scholarship to bear on the question. This project takes a deep dive into Chinese ethical and legal perspectives on automated vehicles, providing a valuable resource for the general public. It also prompts readers to compare and contrast Chinese and Western viewpoints regarding the use of automated vehicles as future transportation and their impact on human-machine relationships. By dedicating individual chapters to specific issues such as programming, safety, liability, privacy, and data protection, this book enables policymakers and general readers to gain a clear understanding of the societal implications of automated vehicles shaped by culture and law. Additionally, by including survey results from two representative Chinese cities with distinct cultural and legal backgrounds, it caters to the need for insights into general Chinese perspectives on the ethical and legal issues surrounding automated vehicles. This book will interest policymakers, technologists and scholars. Chunyan Ding, Professor of Law at City University of Hong Kong, specializes in tort law, health law, privacy and data protection, and comparative civil law. She has authored "Medical Negligence Law in Transitional China" (2012) and has contributed over fifty journal articles and book chapters in her areas of expertise. Ruiping Fan, Chair Professor of Philosophy at City University of Hong Kong, specialises in bioethics and comparative philosophy, focusing on Confucian cultural resources. With 190+ published articles and chapters, he authored "Reconstructionist Confucianism", "Contemporary Confucian Bioethics", "Contemporary Medicine and Confucian Thought" and (co-)edited 12 volumes in his research fields. |
