

1. Record Nr.	UNINA9910780717403321
Autore	Lehmann Wolf D
Titolo	Protein phosphorylation analysis by electrospray mass spectrometry [[electronic resource]] : a guide to concepts and practice / / Wolf D. Lehmann
Pubbl/distr/stampa	Cambridge, : RSC Pub., c2010
ISBN	1-84973-220-5
Descrizione fisica	1 online resource (395 p.)
Disciplina	572.636
Soggetti	Electrospray ionization mass spectrometry Proteins - Analysis Phosphorylation Mass spectrometry
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Acknowledgements -- ; ch. 1. Introduction -- ; ch. 2. Analysis of phosphopeptides by mass spectrometry -- ; ch. 3. Phosphopeptide enrichment -- ; ch. 4. Dephosphorylation -- ; ch. 5. Protein phosphorylation and element mass spectrometry -- ; ch. 6. Structural phosphorylation analysis -- ; ch. 7. Quantitative protein phosphorylation analysis -- Outlook -- Subject index.
Sommario/riassunto	Protein phosphorylation analysis is a central theme in current analytical biochemistry, cell biology and systems biology. Due to its versatility, specificity and sensitivity, mass spectrometry has developed into a key technology in this field. A set of minor and major instrumental innovations mean that mass spectrometers now exhibit a level of performance, a stability of operation, a relative ease of use, and productivity, which would once have been hard to imagine. This book guides the reader through this prolific field by presenting a collection of personal views and selected examples which
