Sommario/riassunto	This volume is a collection of articles concerned with the typology of valency and valence change in a large and diversified sample of

languages that display ergative alignment in their grammar. The sample of languages represented in these descriptive contributions covers most of the geographical areas and linguistic families in which ergativity has been known to exist jointly with well-developed morphological voice, and some languages belonging to families in which ergativity or voice were not previously recognized or adequately described up to now.
