Sommario/riassunto	The use of formulae has become widespread in recent years across most developed countries. In the UK, a conservative estimate is that annually £150 billion of public service expenditure is distributed using formulae, in services such as health care, local government, social security and higher education. This book offers a comprehensive

introduction to the theory and practice underlying the use of such formulae as a basis for funding public services. The philosophy, design and economic consequences of funding formulae have become key policy issues worldwide. However, till now,

Sommario/riassunto	In this monograph, the author offers a new way of examining the much discussed notion of identity through the theoretical and methodological

approach called multimodal interaction analysis. Moving beyond a traditional discourse analysis focus on spoken language, this book expands our understanding of identity construction by looking both at language and its intersection with such paralinguistic features as gesture, as well as how we use space in interaction. The author illustrates this new approach through an extended ethnographic study of two women living in Germany. Examples of their everyday interactions elucidate how multimodal interaction analysis can be used to extend our understanding of how identity is produced and negotiated in context from a more holistic point of view.
