Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references (p. 238-261).
Nota di contenuto	Toward a single financial market / Wim Fonteyne -- ; Pt. 1. Financial integration -- Key concepts, benefits, and risks / Hamid Faruqee -- Current state of play / Francois Haas -- Comparing Europe and the United States / Jorg Decressin and Beata Kudela -- Equity market integration / Hamid Faruqee -- ; Pt. 2. Financial stability -- Risk profiles of financial institutions / Alexander Tieman, Gianni De Nicolo, and Robert Corker -- Internationally active large banking groups / Alexander Tieman and Martin Cihak -- Bank business correlations / Jorg Decressin -- Assessing current prudential arrangements / Martin Cihak and Alexander Tieman -- Financial integration and stability / Wim Fonteyne and Jan-Willem van der Vossen.
Sommario/riassunto	By and large, EU financial integration has been a success story. Still, the reform agenda is far from finished. What are the remaining challenges? What are the gains of closer financial market integration? This IMF book tracks the European Union's journey along the path to a single financial market and identifies the challenges and priorities that remain ahead. It pays particular attention to the most recent integration efforts in the European Union following the introduction of the euro. The study looks at the importance of financial integration, in particular for economic growth, the interplay between banks and markets, and equity market integration. It closely examines the relationship between financial integration and financial stability. This interaction presents the European Union with a challenge, but also with the opportunity to play a pioneering role in developing a regional approach to financial stability that could provide lessons for the rest of the world.

Titolo	Induction Soundings of the Earth's Mantle // by Vladimir Semenov, Maxim Petrishchev
Pubbl/distr/stampa	Cham : , : Springer International Publishing : , : Imprint : Springer, , 2018
ISBN	3-319-53795-4
Edizione	[1st ed. 2018.]
Descrizione fisica	1 online resource (113 pages)
Collana	GeoPlanet: Earth and Planetary Sciences, , 2190-5193
Disciplina	551.11
Soggetti	Geophysics Structural geology Mathematical physics Geophysics/Geodesy Structural Geology Mathematical Applications in the Physical Sciences
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references at the end of each chapters.
Nota di contenuto	Impedances, sources and environments -- Impedances and tippers from one equation -- Modeling of Deep Soundings Study -- Results of deep soundings in Europe -- Electromagnetic monitoring.
Sommario/riassunto	At the heart of this book is the generalized theoretical approach that is applied to investigate the geoelectrical structure of the Earth's mantle. It also analyzes the results of regional and global induction sounding of the Earth's mantle and compares them with the results obtained by other geophysical methods. The generalized theoretical approach employs the Induction Law as a basis for identifying extended relations between magnetic field components, including their plane divergence, impedances and spatial derivatives. The estimations of impedance values and spatial derivatives are performed using the theory of stochastic processes. The book also considers the external sources of magnetic fields used for sounding the Earths mantle from the modern theory perspective, as well as the problem of coincidence of magneto-

variation and magnetotelluric methods. Further, it discusses secular variations in the Earth's resistance caused by non-induction sources, factors that are correlated with the number of earthquakes in the region and shifted in time with global indexes. It is a valuable resource for scientists applying deep induction soundings or interested in the structures of and processes in the Earth's interior.
