| Sommario/riassunto | 'This book.. shines a bright light on a murky world. The contributors attempt to understand the origins of murder, but they also deal with the detail of treatment and show us how professionals are affected by |

powerful psychological forces. The impartial detachment of the observer/supervisor is an artificial construct, and once we realise that, we will be in a better position to do the job properly. The approach is psychodynamic, but there is plenty here to stimulate non-believers. In fact, the book is a challenge to the world of cognitive behavioural therapy; there is more to murder than relapse prevention. It made me think, and what more can you ask?' - Professor Tony Maden, from the Foreword
