Sommario/riassunto	Developments in the understanding and psychotherapeutic treatment of children and adolescents suffering from psychotic levels of disturbance are dealt with in this work, from the Tavistock Clinic Series. The book is chiefly concerned with children troubled in their behaviour, relationships, and communication. There is something extremely unsettling about the disturbed behaviour of sexually abused and severely troubled children. In spite of a sometimes exasperating

measure of perversion and destructive wilfulness, these children manage to communicate a clear plea for help - a plea which deeply affects those in their immediate surroundings who find themselves struggling to make sense of these contradictory messages. This book describes significant new developments in the understanding and treatment of children and adolescents suffering from psychotic levels of disturbance. Each chapter contains a clinical description of a child emerging from a psychotic state, creating a useful collection of case histories.
