

1. Record Nr.	UNINA9910781709203321
Titolo	Climate change, the indoor environment, and health [[electronic resource] /] / Institute of Medicine of the National Academies
Pubbl/distr/stampa	Washington, D.C., : National Academies Press, 2011
ISBN	0-309-20944-7 1-283-27871-5 9786613278715 0-309-20942-0
Descrizione fisica	1 online resource (286 p.)
Disciplina	616.98
Soggetti	Environmentally induced diseases - United States Climatic changes - Health aspects - United States Indoor air pollution - Health aspects - United States Air quality management - United States
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	"Committee on the Effect of Climate Change on Indoor Air Quality and Public Health, Board on Population Health and Public Health Practice."
Nota di bibliografia	Includes bibliographical references.
Nota di contenuto	""Front Matter""; ""Reviewers""; ""Acknowledgments""; ""Contents""; ""Summary""; ""1 Introduction""; ""2 Background""; ""3 Government and Private-Sector Involvement in Climate Change, Indoor Environment, and Health Issues""; ""4 Air Quality""; ""5 Dampness, Moisture, and Flooding""; ""6 Infectious Agents and Pests""; ""7 Thermal Stress""; ""8 Building Ventilation, Weatherization, and Energy Use""; ""9 Key Findings, Guiding Principles, and Priority Issues for Action""; ""Appendix A: Public Meeting Agendas"" ""Appendix B: Environmental Protection Agency Contractor Reports on Climate-Change, Indoor-Environment, and Health Topics""""Appendix C: Biographic Sketches of Committee Members and Staff""
Sommario/riassunto	"The indoor environment affects occupants' health and comfort. Poor environmental conditions and indoor contaminants are estimated to cost the U.S. economy tens of billions of dollars a year in exacerbation of illnesses like asthma, allergic symptoms, and subsequent lost productivity. Climate change has the potential to affect the indoor

environment because conditions inside buildings are influenced by conditions outside them. Climate change, the indoor environment, and health addresses the impacts that climate change may have on the indoor environment and the resulting health effects. It finds that steps taken to mitigate climate change may cause or exacerbate harmful indoor environmental conditions. The book discusses the role the Environmental Protection Agency (EPA) should take in informing the public, health professionals, and those in the building industry about potential risks and what can be done to address them. The study also recommends that building codes account for climate change projections; that federal agencies join to develop or refine protocols and testing standards for evaluating emissions from materials, furnishings, and appliances used in buildings; and that building weatherization efforts include consideration of health effects. Climate change, the indoor environment, and health is written primarily for the EPA and other federal agencies, organizations, and researchers with interests in public health; the environment; building design, construction, and operation; and climate issues."--Publisher's description.
