| Sommario/riassunto      | Individuals with serious and incurable illnesses often require care that goes beyond the body. As they face the challenges of living with and eventually dying from their conditions, they may need to acquire new skills to cope and increase their quality of life. Even those at the beginning of the end of life can take an active role in their treatment. This skill-based program emphasizes flexibility and should be tailored to individual clients. The first module introduces stress management techniques, including cognitive restructuring, relaxation, and problem-focused and emotion-focused coping. |
