

1. Record Nr.	UNINA9910781930503321
Autore	Salmon Paul M.
Titolo	Human Factors Methods and Accident Analysis : Practical Guidance and Case Study Applications // Paul M. Salmon
Pubbl/distr/stampa	London : , : Taylor and Francis, , 2016
ISBN	1-317-12013-2 1-315-58740-8 1-317-12012-4 1-283-31878-4 9786613318787 1-4094-0520-6
Edizione	[First edition.]
Descrizione fisica	1 online resource (216 p.)
Altri autori (Persone)	JenkinsDaniel P LennA©Michael RaffertyLaura StantonNeville A WalkerGuy H
Disciplina	363.1/065
Soggetti	Accidents Accidents - Research Accident investigation Errors - Evaluation
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Cover; Contents; List of Figures; List of Tables; About the Authors; Acknowledgements; Acronyms; Preface; 1 Accidents, Accident Causation Models and Accident Analysis Methods; 2 Human Factors Methods for Accident Analysis; 3 AcciMaps: Lyme Bay Sea Canoeing and Stockwell Mistaken Shooting Case Studies; 4 The Human Factors Analysis and Classification System: Australian General Aviation and Mining Case Studies; 5 The Critical Decision Method: Retail Store Worker Injury Incident Case Study; 6 Propositional Networks: Challenger II Tank Friendly Fire Case Study 7 Critical Path Analysis: Ladbroke Grove Case Study8 Human Factors

Sommario/riassunto

"This book provides an overview of, and practical guidance on, the range of human factors (HF) methods that can be used for the purposes of accident analysis and investigation in complex sociotechnical systems. Human Factors Methods and Accident Analysis begins with an overview of different accident causation models and an introduction to the concepts of accident analysis and investigation. It then presents a discussion focussing on the importance of, and difficulties associated with, collecting appropriate data for accident analysis purposes. Following this, a range of HF-based accident analysis methods are described, as well as step-by-step guidance on how to apply them. To demonstrate how the different methods are applied, and what the outputs are, the book presents a series of case study applications across a range of safety critical domains. It concludes with a chapter focussing on the data challenges faced when collecting, coding and analysing accident data, along with future directions in the area. Human Factors Methods and Accident Analysis is the first book to offer a practical guide for investigators, practitioners and researchers wishing to apply accident analysis methods. It is also unique in presenting a series of novel applications of accident analysis methods, including HF methods not previously used for these purposes (e.g. EAST, critical path analysis), as well as applications of methods in new domains."--Provided by publisher.
