

1. Record Nr.	UNINA9910781933403321
Autore	Karvonen Andrew <1971->
Titolo	Politics of urban runoff : nature, technology, and the sustainable city / / Andrew Karvonen
Pubbl/distr/stampa	Cambridge, Mass., : MIT Press, ©2011
ISBN	0-262-29782-5 1-283-30281-0 9786613302816 0-262-29870-8
Descrizione fisica	xiv, 288 p. : ill., map
Collana	Urban and industrial environments
Disciplina	363.72/84
Soggetti	Urban runoff Water quality management - Political aspects Water quality - Texas - Austin Water quality - Washington (State) - Seattle
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Bibliographic Level Mode of Issuance: Monograph
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	The dilemma of water in the city -- Urban runoff and the city of relations -- Saving the springs : urban expansion and water quality in Austin -- After the flood : retrofitting Austin's urban core to accommodate growth -- Metronatural : inventing and taming nature in Seattle -- Reasserting the place of nature in Seattle's urban creeks -- Politics of urban runoff : building relations through active citizenship -- Towards the relational city : imaginaries, expertise, experiments.
Sommario/riassunto	A study of urban stormwater runoff that explores the relationships among nature, technology, and society in cities. When rain falls on the city, it creates urban runoff that cause flooding, erosion, and water pollution. Municipal engineers manage a complex network of technical and natural systems to treat and remove these temporary water flows from cities as quickly as possible. Urban runoff is frequently discussed in terms of technical expertise and environmental management, but it encompasses a multitude of such nontechnical issues as land use, quality of life, governance, aesthetics, and community identity, and is central to the larger debates on creating more sustainable and livable

cities. In this book, Andrew Karvonen uses urban runoff as a lens to view the relationships among nature, technology, and society. Offering theoretical insights from urban environmental history, human geography, landscape and ecological planning, and science and technology studies as well as empirical evidence from case studies, Karvonen proposes a new relational politics of urban nature. After describing the evolution of urban runoff practices, Karvonen analyzes the urban runoff activities in Austin and Seattle--two cities known for their highly contested public debates over runoff issues and exemplary storm water management practices. The Austin case study highlights the tensions among urban development, property rights, land use planning, and citizen activism; the Seattle case study explores the city's long-standing reputation for being in harmony with nature. Drawing on these accounts, Karvonen suggests a new relational politics of urban nature that is situated, inclusive, and action-oriented to address the tensions among nature, technology, and society.
