Sommario/riassunto	Based on a study of two casebooks, which include Dr Mackieson records for 257 patients with a variety of illnesses seen from 1826 to 1858 and 115 patients with mental illness seen from 1868 to 1874, two manuscripts, and a diary, David Shephard illustrates the wide variety of representative cases in Dr Mackieson's career and situates his work in the context of medical practice at the time. The book will interest a variety of readers, including general historians, medical

historians, social historians, historians with an interest in the Atlantic provinces, physicians, and academic libraries.
